

FROM PROTOCOL REQUIREMENTS TO ANALYSIS-READY, EXPERT-REVIEWED DELIVERABLES.

ClinQuantix is a specialist clinical data management and biostatistics consultancy, based in the UAE and working on international studies for sponsors and CROs. We work inside your existing EDC, statistical, document and quality environments - there is no platform to adopt and nothing to migrate. Senior people do the work, and every deliverable carries expert review.

CONSULTANCY SERVICES

- **Study Start-up Data Management**
eCRF design, database build oversight, edit check specification and UAT within your EDC, so the study opens on a clean foundation.
- **Full-Lifecycle Data Management**
Ongoing data review, query management, external data reconciliation and a defensible path to database lock.
- **Biostatistics & Statistical Programming**
Statistical input from design through CSR - SAPs, analysis datasets, tables, listings and figures, produced in your statistical environment.
- **Biometrics Advisory & Embedded Support**
Senior review, rescue work and embedded capacity when your biometrics function needs judgement rather than headcount.
- **SOPs, Quality Frameworks & Inspection Readiness**
Fit-for-purpose SOPs, quality documentation and preparation that holds up when an inspector reads it.
- **AI-Assisted Workflow Consultancy**
Governed automation of repetitive data and programming work - client-approved tools, with human review at every control point.

HOW WE DELIVER

- We work in your systems. There is no ClinQuantix platform, and your data never leaves your environment.
- Senior people do the work. The person you scope with is the person who delivers.
- Automate the repetition. Keep the judgement. AI assists; humans decide, and the review is documented.
- Deliverables are built for scrutiny. If it would not survive an audit, it is not finished.

ENGAGEMENT MODELS

Engagements begin with an NDA and a focused discussion, followed by a written scope and statement of work. Clients engage us for defined deliverables, for a single study phase, or as embedded support alongside their own biometrics teams over longer horizons. Services can be taken individually or combined, and scopes are adjusted by agreement as studies evolve.
